Full Broadband Access ■ Cloud Utilisation

About Us

Precisio is Western Australia's leading network management solutions provider. Our expertise with software, networks, and technology in general is matched with a high level of dedication to our customers. We bring hyper-alert awareness to every aspect of every job.

As our customer, we wish to deliver to you all the benefits of today's technological advances as soon as they are available. As your partner, we assure that our hard work is going to make your own hard work pay off quite a bit more. We understand that every business-to-business relationship is unique, which is why we offer a high level of customisation and personal service to all of our Collaborated Networking clients.

It is more important now than ever for Australian businesses to prepare themselves for technological advances. Our service allows for all the benefits of tomorrow's 'disruptive technology' with none of the disruption. A seamless approach to your IT progression is always the best answer.

FREE on-site network audit**

Solving network problems for Australia's business

Businesses today face more challenges than ever. Competitive pressures and thin margins, along with rapidly changing technology, make it difficult to keep up the pace. The technology that worked last year may not be enough for today's environment.

Success means more than just keeping up with everybody else. It means growth.

Start with a solid technological foundation

Achieving that growth starts with a solid technological foundation. Beginning with a comprehensive network audit, Precisio takes a complete inventory of your network and tells you what works and what doesn't. We'll find the flaws, the shortfalls and the inefficiencies, and let you know precisely what needs to be done to make your network operate like it should and make your business more productive and profitable.

Finding small problems before they become big disasters

Precisio's affordable monitoring service not only takes care of all of your day-to-day network functions, like adds/moves/changes and new installs, it gives you your own personal on-call technician who understands your business imperatives and the technology that makes it happen.

Imagine A Better Business Scenario Think Differently

Services available include:

- Moves/adds/changes
- Network upgrades
- Network management
- Anti-virus and anti-malware
- NBN Internet provider
- Hardware and software repairs
- Monthly maintenance
- Hosted Microsoft Exchange
- Hosted Phone
- Software as a service

Precisio is here for you.

Business success comes down to reliable communication, dependable computing and a network that runs when you need it to.

A network failure or a virus attack may mean lost dollars, inefficient delays and dissatisfied customers. The risk is too great to leave your network management in the hands of whoever has the most free time in the office. You need experts on your side—for two reasons:

1. You need proactive care so that hidden network problems don't turn into major disasters.
2. When problems do occur, you need someone who knows how to fix the problem immediately, with as little disruption as possible.

One-time or monthly maintenance

You're never locked into a long-term contract. We're available to you for precisely the amount of time you need us—no more and no less. Whether you need a single visit to install a network or monthly maintenance to keep it running smoothly, we're available. Our certified technicians are skilled in problem-solving, and we take the time to understand your business.

What Precisio can do for you

The best way to ensure that your network is at its peak level of efficiency is to start with a comprehensive network audit. For a limited time, we're offering a free network audit, normally priced at \$299.

You're not alone (and neither are we)

No business flourishes in isolation. Today's technological model, and enabling technology, has enabled a new way of doing business that is much more efficient. Today's successful business operates as part of an ecosystem.

We're part of that business ecosystem. We don't see you as just a client. We're part of something much bigger. We know that you count on us to keep your network up and running, handle the day-to-day network operations, and fix problems quickly when they arise. And more importantly, you count on us to know when those problems are coming, before they cause problems, and to take proactive measures when necessary.

We've sought out the best in hosted email, cloud-based infrastructure and software services, backup and storage, disaster recovery, and much more, so you don't have to spend your precious time trying to sort through it all.

Whether you need a one-time repair or affordable monthly service, we're here to help you succeed.

Call Us today on 08 6364 0100
for your free on-site network audit.

Don't miss out on our special offer to you! Free On-site Network Audit.

It's guaranteed that we'll find more than a few issues worthy of your attention.

Our network audit is indispensable as an IT consultation for any business. It's yours free, even if you ultimately decline our exceptional service.

A computer network should never be an 'install it and leave it' proposition. Your needs change, the technology changes, and your staff changes. The network, if left alone, falls behind. The result is inefficiency, or worse—network failure. A network audit lets you know exactly where you stand, what still works, what doesn't, and what needs to be improved to keep your business profitable.
